EXPERIENCE

Dassault Systèmes

February 2026 – August 2026

Software Engineering Intern

's-Hertogenbosch, Netherlands

Asynchronous Supply Chain Data Processor | *Spring Boot, Redis, Kotlin, TypeScript*

- Designed an asynchronous bulk-import pipeline in Kotlin/Spring Boot and Redis supporting CSV/Excel creation and updates of datasets up to **600,000 records per file**.
- Helped **customers and 5 internal teams** load large datasets **faster by ~35%**, accelerating onboarding, demos, and day-to-day data updates without manual UI entry.

DAF Trucks N.V.

July 2024 – January 2025

Software Engineering Intern

Eindhoven, Netherlands

Internal Project Tracking Tool | *Spring Boot, React, TypeScript*

- Designed and developed a **full-stack internal web tool** for tracking projects to visualize project **timelines, dependencies, and milestones**.
- Reduced transferred records per request by ~80%** by replacing full-dataset retrieval with **paginated and optimized database queries**.

PROJECTS

Music Streaming Platform | *C#, .NET, React, TypeScript, Docker, Kubernetes, Azure*

- Built a **microservice-based** music streaming application using **C#, .NET and React**, containerized with **Docker** and deployed to **Azure Kubernetes Service**.
- Implemented **RabbitMQ** for asynchronous service communication and **Saga Pattern** to coordinate distributed transactions across services.
- Deployed the application on **Azure** using **Azure Kubernetes Service, Azure SQL, Blob Storage, and Container Registry** to support containerized services, persistent data storage, and media assets.

Automated AI Model Deployment Framework (Brainport) | *Python, FastAPI, Docker, Kubernetes*

- Built a proof-of-concept deployment framework that packaged **Hugging Face models into Docker containers** and **dynamically deployed them to Kubernetes** cluster through a FastAPI service.
- Optimized local build and deployment workflow, **reducing container build time from 15 minutes to 1 minute** using a prebuilt base docker image.

Multiplayer Mahjong Game | *React, TypeScript, Docker, WebSockets*

- Built a **real-time multiplayer** Mahjong application supporting four-player games, private rooms, public matchmaking, and bot opponents.
- Implemented live game-state synchronization over WebSockets** to keep four-player matches synchronized and support rematches.

EDUCATION

Fontys University of Applied Sciences

2022 - 2026

B.Sc. in Information Communication Technology

Eindhoven, Netherlands

Minor: Business Management at Chuo University

Relevant Coursework: Database Systems, Distributed Systems & Microservices, Data Engineering/ETL, Cloud Computing, Software Architecture, CI/CD
